

Upside down !?

*Design a chair due to
Andreu World Company's expectation.*

Subject

A sustainable design of a seat and/or table.

Conditions

The category of seats includes: chairs, armchairs, lounge chairs, stools, benches and sofas.

Materials

The use of sustainable materials such as the following will be assessed:

-Wood: wood is the most ecological, biodegradable, natural, recyclable material that generates the lowest environmental impact with a carbon footprint lower than any other material.

Social and cultural assessment criteria

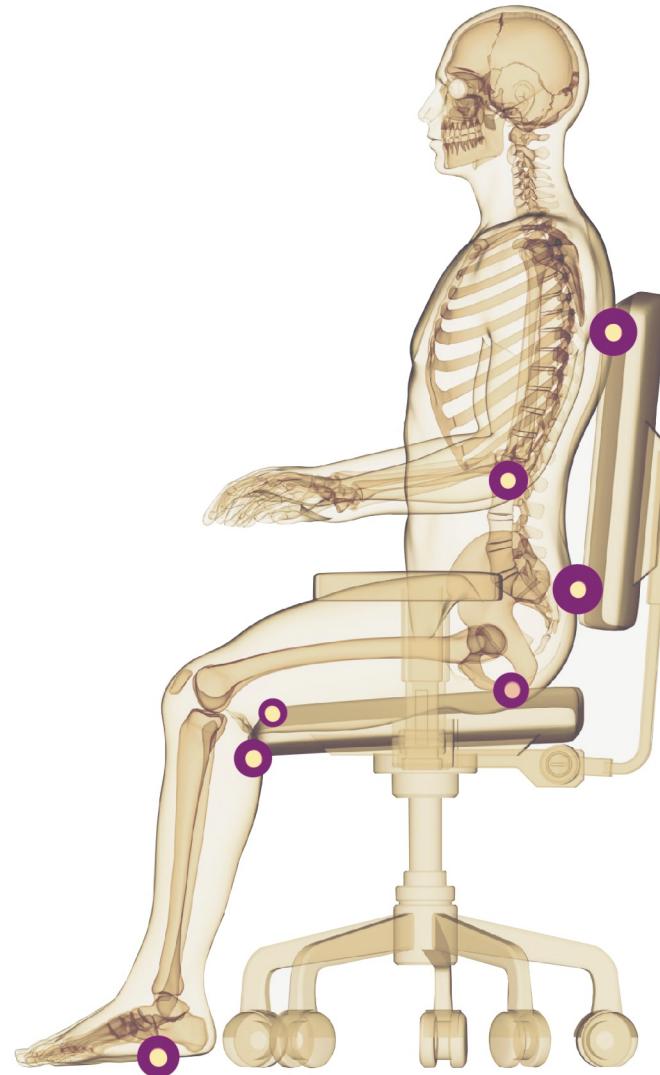

The approach should focus on a design that aspires to the durability and resilience and long-term desirability of the furniture. The proposals may also be related to the promotion of universal accessibility, cultural enrichment and the application of design to improve the well-being of people in the environments they inhabit.

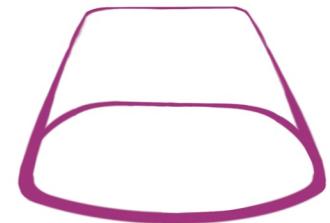

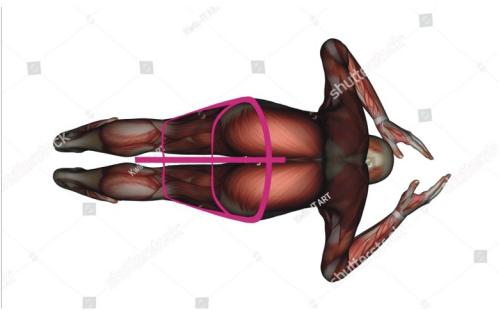

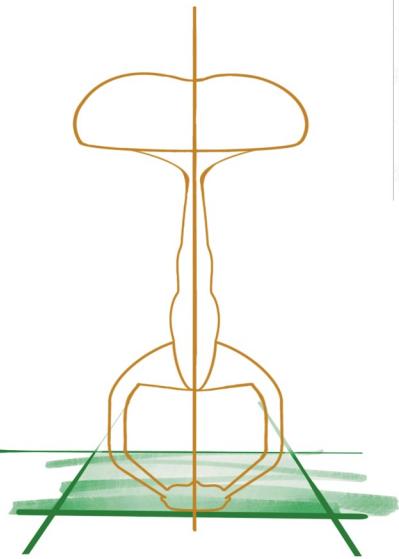

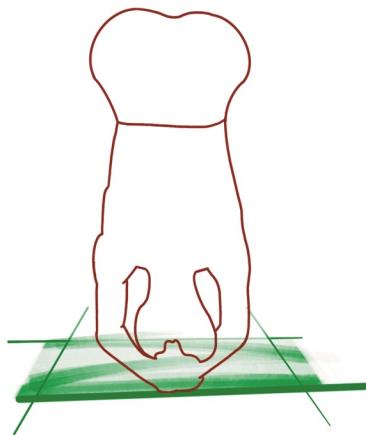

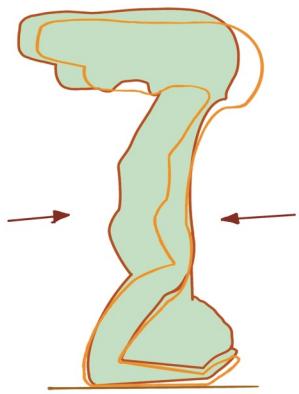

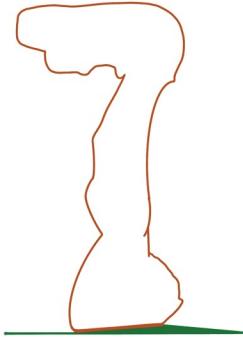

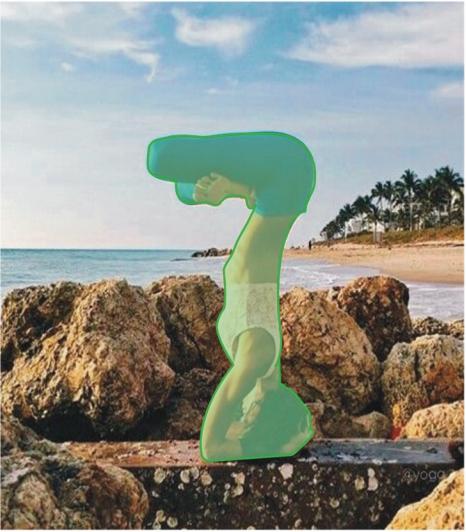

Human Anatomy and The Rest Points

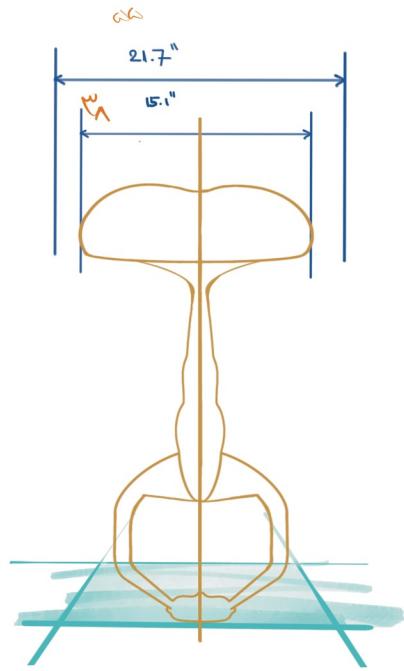

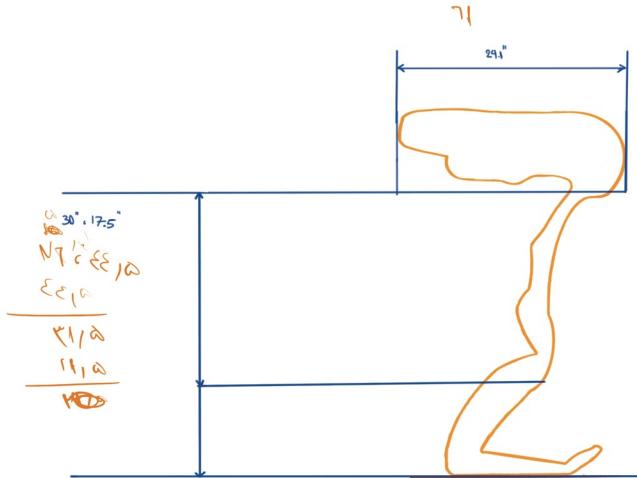

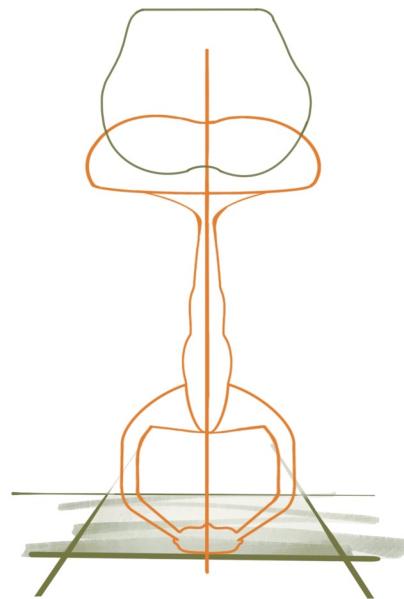

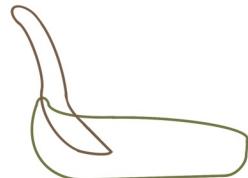

In a standing position, human body weight is regularly transferred from the soles of the feet to the ground, and after a while, due to the transfer the body always feels tired.

To relieve the fatigue, a person sits and in the sitting position, other parts of the human body interact with the surfaces. These points are called the rest-point.

The rest-points are signed in the photo.
